## Chapter 11: Rational and Irrational Numbers

### Packet Overview

Date	Objective(s)	Page Number
Monday, April 20	Chapter 11-1: Be able to learn and apply some properties of rational numbers.	2-5
Tuesday, April 21	Chapter 11-2: Be able to express rational numbers as decimals and fraction.	6-7
Wednesday, April 22	Chapter 11-3: Be able to find the square roots of numbers that have rational square roots. <b>Quiz Tomorrow on 11: 1-2</b>	8-11
Thursday, April 23	<b>Quiz on 11: 1-2</b> Chapter 11-3 Continued: Be able to find the square roots of numbers that have rational square roots.	12-13 14
Friday, April 24	No school	

#### Additional Notes:

- ❖ **Materials:** Printed packet or notebook paper; pencils. (Calculators **ARE** needed).
  - **Note:** If you are using notebook paper, be sure to write the pages and numbers of the material.
  - **Example:** P. 6; #1) \_\_\_\_\_
- ❖ **Answers of odd problems are in the back of the book. Other answers will be provided at the end of each lesson.**
- ❖ **Quiz:** Located on pages 12-13. This should be taken *without* looking at previous work. No answers are provided for the quiz.

#### Academic Honesty

I certify that I completed this assignment independently in accordance with the GHNO Academy Honor Code.

*Algebra Unit: Chapter 11 Rational and Irrational Numbers*

**Unit Overview: Rational and Irrational Numbers**

We are now starting Chapter 11, Rational and Irrational Numbers. In this chapter, you will:

- 1) Properties of Rational Numbers
- 2) Decimal Forms of Rational Numbers
- 3) Rational Square Roots
- 4) Irrational Square Roots
- 5) Square Roots of Variable Expressions
- 6) The Pythagorean Theorem
- 7) Multiplying, Dividing, and Simplifying Radicals
- 8) Adding and Subtracting Radicals
- 9) Multiplication of Binomials Containing Radicals
- 10) Simple Radical Equations

**Monday, April 20**

**Lesson 11-1: Properties of Rational Numbers**

**Objective:** Be able to learn and apply some properties of rational numbers.

➤ Here is a quick review of some vocabulary:

<u>Rational Numbers</u>	<u>Irrational Numbers</u>
<b><u>CAN</u></b> be written as FRACTIONS!	<b><u>CANNOT</u></b> be written as FRACTIONS!
$5 = \frac{5}{1} \qquad \frac{2}{3}$ $1.25 = 1 \frac{1}{4} = \frac{5}{4} \qquad 0.333 \dots = \frac{1}{3}$	$\sqrt{5} \qquad \pi$
<b>INTEGERS = ...-3, -2, -1, 0, 1, 2, 3... NO FRACTIONS OR DECIMALS!</b>	
For all integers a and b and all positive integers c and d:	
$\frac{a}{c} > \frac{b}{d}$ if and only if $ad > bc$	$\frac{a}{c} < \frac{b}{d}$ if and only if $ad < bc$

So, what did that a and b thing above mean?

To determine if fractions are  $<$ ,  $=$ , or  $>$ ,  
 you can find **common denominators and compare** or **cross multiply**.

Example 1:

$$\frac{5}{8} ? \frac{3}{4} \begin{matrix} \times 2 \\ \times 2 \end{matrix}$$

$$\frac{5}{8} ? \frac{6}{8} \leftarrow \text{common denom.}$$

$$\frac{5}{8} < \frac{6}{8}$$

Example 2:

$$\begin{matrix} (4)(5) = 20 & & (8)(3) = 24 \\ \swarrow & & \searrow \\ \frac{5}{8} & ? & \frac{3}{4} \end{matrix}$$

bigger

$$(4)(5) ? (8)(3)$$

$$20 < 24$$

SO

$$\frac{5}{8} < \frac{3}{4}$$

2)

$$\frac{11}{15} ? \frac{2}{3}$$

4)

$$\frac{7}{8} ? \frac{5}{6}$$

$$\frac{-7 \times 3}{8 \times 3} \quad \frac{-5 \times 4}{6 \times 4}$$

$$\frac{-21}{24} < \frac{-20}{24}$$

$$\frac{7}{8} < \frac{5}{6}$$

$$\begin{matrix} \swarrow & & \searrow \\ \frac{7}{8} & ? & \frac{5}{6} \end{matrix}$$

-40

$$-56 < -40$$

so

$$\frac{7}{8} < \frac{5}{6}$$

<p>6)</p> $\frac{12}{19} ? \frac{17}{24}$ <p>common denominator</p> <p>11</p> <p>288 ← <del><math>\frac{12}{19}</math></del> <del><math>\frac{17}{24}</math></del> → 323</p> <div style="border: 1px solid black; padding: 5px; width: fit-content; margin: 10px auto;"> <math>\frac{12}{19} &lt; \frac{17}{24}</math> </div>	<p>8)</p> $-\frac{214}{14} ? -15\frac{2}{3}$ <p><del><math>\frac{-214}{14}</math></del> <del><math>\frac{-47}{3}</math></del></p> <div style="border: 1px solid black; height: 30px; width: 100%; margin-top: 20px;"></div>
---	---

Answers: 2) > 8) >

- The next section wants you to “arrange each group of numbers in order from least to greatest.” I find, when there are more than two fractions, that it is easier to change them all into decimals, unless it is easy to find the common denominators.
- Arrange each group of numbers from least to

<p>Example with common denominator:</p> $\frac{3}{5}, \frac{1}{2}, \frac{3}{4}$ $\frac{3}{5} \frac{x4}{x4} = \frac{12}{20}$ $\frac{1}{2} \frac{x10}{x10} = \frac{10}{20} \text{ Least}$ $\frac{3}{4} \frac{x5}{x5} = \frac{15}{20} \text{ Greatest}$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 10px auto;"> <math>\frac{1}{2}, \frac{3}{5}, \frac{3}{4}</math> </div>	<p>Example with decimals:</p> $\frac{3}{5}, \frac{1}{2}, \frac{3}{4}$ $\frac{3}{5} = 3 \div 5 = 0.6$ $\frac{1}{2} = 1 \div 2 = 0.5$ $\frac{3}{4} = 3 \div 4 = 0.75$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 10px auto;"> <math>\frac{1}{2}, \frac{3}{5}, \frac{3}{4}</math> </div>
--	---

➤ Here are some more for you! P. 510:

3)	5)
7)	9)
11)	13)

➤ Great! Now be sure to check the answers in the back of the text and correct your work!

**Tuesday, April 21**

**Algebra Unit: Rational and Irrational Numbers**

**Lesson 11-2: Decimal Forms of Rational Numbers**

**Objective:** Be able to express rational numbers as decimals and fraction.

- Today we are turning fractions into decimals and decimals into fractions.
- YOU MAY USE A CALCULATOR 😊
- Turn to page 514

<p>10)</p> $\frac{15}{32}$ <p style="text-align: center;"><math>-15 \div 32 =</math></p> <div style="text-align: center;"> </div> <p style="text-align: center;">Yes, you can use the calculator 😊.          Answer: 0.46875</p>	<p>14)</p> <div style="text-align: center;"> </div> <p style="text-align: center;"><math>3 \div 4 = 0.75</math></p> <p style="text-align: center;">Answer: <math>-6.75</math></p>
--	---

- Now let us change decimals into fractions.
- Here are some reminders first:  $0.3 = \frac{3}{10}$  (tenth's),  $0.03 = \frac{3}{100}$  (hundredth's, 2#s, 2 zeros),  $0.003 = \frac{3}{1000}$  (thousandth's, 3#s, 3 zeros)
- Turn to p. 515:

<p>18)</p> <p style="text-align: center;">0.66</p> $\frac{66}{100} \div 2$ <div style="text-align: center; border: 1px solid red; padding: 5px; width: fit-content; margin: 0 auto;"> <math>\frac{33}{50}</math> </div>	<p>20)</p> <p style="text-align: center;">3.8</p> $3 \frac{8}{10} \div 2$ <div style="text-align: center; border: 1px solid red; padding: 5px; width: fit-content; margin: 0 auto;"> <math>3 \frac{4}{5}</math> </div>
---	--

➤ Complete p. 515 #'s 5 – 19 odd and check the answers in the back of the text.

5)	7)
9)	11)
13)	15)
17)	19)

Wednesday, April 22

*Algebra Unit: Rational and Irrational Numbers*

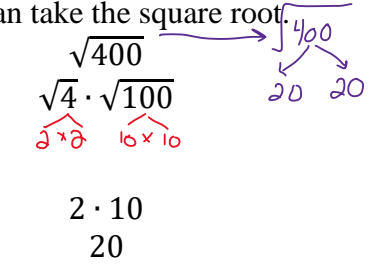

**Lesson: 11-3: Rational Square Roots**

**Objective:** Be able to find the square roots of numbers that have rational square roots.

➤ Remember:

- Subtraction undoes addition
  - $2 + 5 = 7$        $7 - 5 = 2$
- Division undoes multiplication
  - $2 \times 5 = 10$      $10 \div 5 = 2$
- Square roots undo squaring a number
  - $5^2 = 25$        $\sqrt{25} = 5$

➤ Here are a few things to know before we start:

Product (Multiplication) Property of Square Roots	Quotient (Division) Property of Square Roots
$\sqrt{ab} = \sqrt{a} \cdot \sqrt{b}$ <p>You may know this answer without breaking it down, however, sometimes it is easier to break it down into smaller numbers of which you can take the square root.</p>  $\sqrt{4} \cdot \sqrt{100}$ $2 \cdot 10$ $20$	$\sqrt{\frac{a}{b}} = \frac{\sqrt{a}}{\sqrt{b}}$  $\sqrt{\frac{25}{81}} = \frac{\sqrt{25}}{\sqrt{81}} = \frac{5}{9}$

# Algebra 1: Rational and Irrational Numbers

April 20-24

- Today's work will be from page 519.
- You can use calculators but...SHOW STEPS PLEASE!!! WHY???
- I assure you, in the **next sections**, it will be clear why these details need to be shown!

<p>4) <math>\sqrt{121}</math></p> $\sqrt{11 \cdot 11}$ $\sqrt{11^2}$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 0 auto;">11</div>	<p>6) <math>-\sqrt{196}</math></p> $-\sqrt{2 \cdot 98}$ $-\sqrt{2 \cdot 2 \cdot 49}$ $-\sqrt{2 \cdot 2 \cdot 7 \cdot 7}$ $-\sqrt{2^2 \cdot 7^2}$ $-\sqrt{2^2} \cdot \sqrt{7^2}$ $-2 \cdot 7$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 0 auto;">-14</div> <p><i>Handwritten notes:</i> OR <math>-\sqrt{14 \cdot 14}</math> <math>-\sqrt{14^2}</math> <div style="border: 1px solid red; padding: 2px; display: inline-block;">-14</div></p>
<p>8) <math>\sqrt{576}</math></p> $\sqrt{2 \cdot 288}$ $\sqrt{2 \cdot 2 \cdot 144}$ $\sqrt{2 \cdot 2 \cdot 2 \cdot 72}$ $\sqrt{2 \cdot 2 \cdot 2 \cdot 2 \cdot 36}$ $\sqrt{2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 18}$ $\sqrt{2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 9}$ $\sqrt{2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 2 \cdot 3 \cdot 3}$ $\sqrt{2^2 \cdot 2^2 \cdot 2^2 \cdot 3^2}$ $\sqrt{2^2} \cdot \sqrt{2^2} \cdot \sqrt{2^2} \cdot \sqrt{3^2}$ $2 \cdot 2 \cdot 2 \cdot 3$ $8 \cdot 3$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 0 auto;">24</div> <p><i>Handwritten notes:</i> shorter way <math>\sqrt{2 \cdot 2 \cdot 12 \cdot 12}</math> <math>\sqrt{2^2 \cdot 12^2}</math> <math>\sqrt{2^2} \cdot \sqrt{12^2}</math> 2 12 <div style="border: 1px solid red; padding: 2px; display: inline-block;">24</div> " )</p>	<p>10) <math>\pm\sqrt{1225}</math></p> $\pm\sqrt{5 \cdot 245}$ $\pm\sqrt{5 \cdot 5 \cdot 49}$ $\pm\sqrt{5 \cdot 5 \cdot 7 \cdot 7}$ $\pm\sqrt{5^2 \cdot 7^2}$ $\pm\sqrt{5^2} \cdot \sqrt{7^2}$ $\pm 5 \cdot 7$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 0 auto;">±35</div> <p>Check:</p> $(35)(35) = 1225$ $(-35)(-35) = 1225$

➤ Now we will look at the next even problems on p. 519 that involve fractions.

<p>12) <math>-\sqrt{\frac{225}{49}}</math></p> $-\frac{\sqrt{225}}{\sqrt{49}}$ $-\frac{\sqrt{15^2}}{\sqrt{7^2}}$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 10px auto;"> <math display="block">\frac{15}{7}</math> </div>	<p>16) <math>\sqrt{\frac{529}{576}}</math></p> <p>What if there was no handy calculator and you could not figure out how to break these down? Estimate and try...</p> <p style="text-align: right;"> <math>(20)(20) = 400</math>  <math>(21)(21) = 441</math>  <math>(22)(22) = 484</math>  <math>(23)(23) = 529</math>  <math>(24)(24) = 576</math> </p> $\frac{\sqrt{23^2}}{\sqrt{24^2}}$ <div style="border: 1px solid red; padding: 5px; width: fit-content; margin: 10px auto;"> <math display="block">\frac{23}{24}</math> </div>
---	---

➤ Continue on page 519 #'s 1-15 odd and CHECK YOUR ANSWERS!!!

<p>1)</p>	<p>3)</p>
<p>5)</p>	<p>7)</p>

9)	11)
13)	15)

➤ That is all for now!

**Thursday, April 23**

***Algebra Unit: Rational and Irrational Numbers***

**Quiz on 11: 1-2**

**Lesson: 11-3 Continued: Rational Square Roots**

**Objective:** Be able to find the square roots of numbers that have rational square roots.

- You may want to review the work from Tuesday and Wednesday prior to the quiz 😊.
- Remember, nothing but a pencil and paper (or this sheet) should be out for the quiz.

**Quiz on Chapter 11: 1-2**

<p>1) Use <math>&lt;</math>, <math>=</math>, or <math>&gt;</math> to make the statement true.</p> $\frac{8}{3} \quad \frac{17}{7}$	<p>2) Use <math>&lt;</math>, <math>=</math>, or <math>&gt;</math> to make the statement true.</p> $-\frac{25}{12} \quad -2\frac{2}{11}$
<p>3) Arrange the group from least to greatest:</p> $-\frac{39}{8}, -4.7, -\frac{41}{9}$	<p>4) Express the fraction as a decimal.</p> $-\frac{3}{8}$

<p>5) Express the fraction as a decimal.</p> $-3\frac{11}{20}$	<p>6) Express as a fraction in simplest form:</p> $0.78$
<p>7) Express as a fraction in simplest form:</p> $-2.05$	<p>That is the end of the quiz 😊.</p>

➤ Now that the quiz is over, turn to the next page.

# Algebra 1: Rational and Irrational Numbers

April 20-24

- We are going to continue with 11-3 on page 519.
- I will give you a few examples.
- They look like the fractions that we did yesterday, but they NEED to be REDUCED before you can take the square root.

<p>22)</p> $-\sqrt{\frac{12}{75}}$ $-\sqrt{\frac{3 \cdot 4}{3 \cdot 25}}$ $-\sqrt{\frac{4}{25}}$ $-\frac{\sqrt{4}}{\sqrt{25}}$ $\boxed{-\frac{2}{5}}$	<p>24)</p> $\sqrt{\frac{20}{45}}$ $\sqrt{\frac{5 \cdot 4}{5 \cdot 9}}$ $\sqrt{\frac{4}{9}}$ $\frac{\sqrt{4}}{\sqrt{9}}$ $\boxed{\frac{2}{3}}$
---	---

➤ Your turn!

<p>21)</p>	<p>23)</p>
------------	------------

➤ Check those answers!

**Friday, April 24**

NO SCHOOL!!!
